# Discovery / Asset Inventory
Keep track of every asset

With devices entering and leaving your network constantly, you need a tool that keeps a complete inventory of every asset.

Ivanti provides an automated asset discovery and inventory management solution for multi-site, multi-platform IT environments. Discover and audit every computer, server, printer, and switch across the network.

It's not just the data—it's what you do with it

Ivanti® LANrev discovers unmanaged computers on your network to facilitate deployment of the agent. LANrev's inventory includes more than 800 Information Items, including user, hardware, software, and configuration data. Administrators can also create Custom Information items to accommodate reporting requirements specific to their own business.

Policies, filters, and dynamic Smart Groups can be built easily from any of the data, enabling better reporting, as well as management tasks—such as software deployments—targeted to the right devices and users.
