iOS Management
iOS is here to stay

IT managers who aren't provisioning for iOS devices are living in denial. iPhones and iPads will be operating on your network, whether you choose to plan for them or not. Aren't you better off with a comprehensive management platform that's built to address iOS?

Managing Apple mobile devices requires deep integration not only with iOS, but also with the entire Apple ecosystem and management framework. Ivanti LANrev delivers on both fronts. We incorporate full support for Device Enrollment Program (DEP), which enables you to build your own configurations into the device out-of-box experience. That means you can pass out shrink-wrapped, pre-configured devices. We also support Volume Purchase Program (VPP), which enables you to manage App Store licenses assigned by user or by device, and the entire range of Apple's management APIs for security, configuration, and management of iOS devices.
