Ivanti Service Manager
Supported Languages and Cultures

Ivanti® Service Manager provides a full translation for some languages and supports several other languages. *Support* means that customers can add the language to Ivanti Service Manager but they must use the translation tools to provide the translations for their language.

A *culture* comprises the language, number formats, currency symbols, and country-specific settings. For Ivanti Service Manager, the words *culture* and *language* are used interchangeably.

The format for the culture name is the two-letter language code in lower case and the two-letter subculture code in upper case. Examples include ja-JP for Japanese (Japan) and en-US for English (United States). In cases where a two-letter language code is not available, a three-letter code derived from ISO 639-2 is used.

Supported Languages and Cultures with Translations

The following table lists the languages and associated culture codes that are supported in Ivanti Service Manager, and also lists which languages are fully translated out-of-the-box.
