Enabling Superior Patient Care

Simplifying and accelerating clinicians' access to patient data and applications leads to improved patient care. Imprivata optimizes clinicians' logon process; Ivanti delivers a great user experience for clinicians from any device or any location within their facility—or at home. By combining fast, secure logon capabilities with an optimized end user experience, clinicians gain optimal performance from their applications and their desktop from anywhere so they have more time to spend with patients.
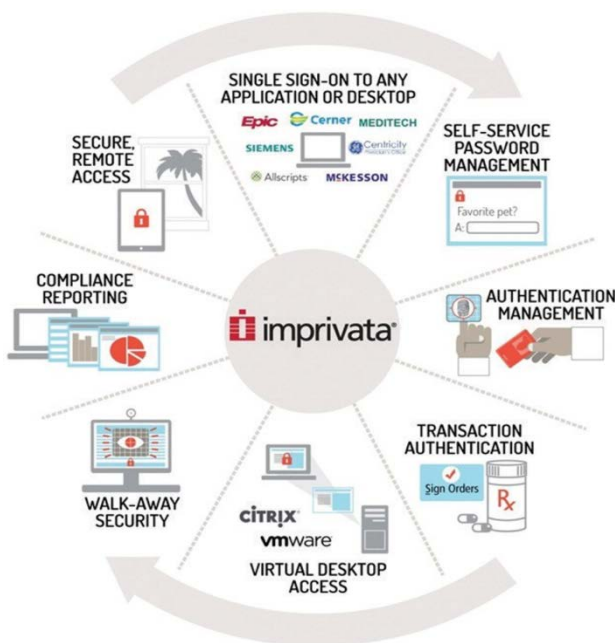

Imprivata

Imprivata knows that technology has the power to transform healthcare delivery for the better. The company focuses on removing the barriers that often make technology as much of a hindrance as it is a help for clinicians.

Imprivata has a strong focus on the healthcare industry and its unique requirements; a broad portfolio of advanced, healthcare-specific solutions; and a long track record of successful healthcare implementations worldwide. These are among the

attributes that position Imprivata as the recognized leader in healthcare IT security, and Imprivata OneSign® as the leading solution for authentication management, single sign-on, and virtual desktop access in the healthcare industry.

Ivanti

Ivanti® User Workspace Manager is designed to meet the needs of even the most demanding clinical environments. With Ivanti, applications and devices become portable and interchangeable, enabling clinicians to access their desktop and patient data using desktop PCs, laptops, tablets, smart phones, and virtual desktops anywhere at any time. Using Ivanti, clinicians always experience a consistent and personalized computing environment so they can focus on patient care, not their desktop or applications. In addition, Ivanti helps maintain Protected Health Information (PHI) security and compliance by tracking who is accessing what application and devices and when, with auditable logs.

The complete workspace management solution for physical, virtual, and cloud desktops

Benefits of Using Ivanti and Imprivata OneSign:

Faster logons and reconnect times: Imprivata enables No Click Access™ to desktops and applications with the tap of a badge or swipe of a fingerprint. Advanced authentication and Single Sign-On eliminates repetitive manual logons, enabling care providers to focus on patients, not technology.

Ivanti optimizes the logon and reconnect processes by only executing what's absolutely required for logon and by using parallel processing. For example, Ivanti will map drives and printers at application start rather than at logon, and will map multiple drives at the same time. With Imprivata and Ivanti, logon times can often be shortened to 10-15 seconds, and session-reconnect times to just a few seconds.

Streamlined workflows: Imprivata automates the process of launching and authenticating clinicians to their virtual desktops and clinical applications, and streamlines CPOE workflows. Ivanti implements policy on-demand (e.g. synchronizing applications and settings at process start, not just logon) and employs location-awareness capabilities to make sure the desktop presented at logon is appropriate for the user and environment.

Virtual Desktop support: Imprivata and Ivanti work seamlessly with both virtual and physical desktops and applications, which means clinicians need not worry about how they access their applications and patient data. The desktop state is maintained across devices such as smartphones, tablets, laptops, and PCs. Support for non-persistent desktops also means significant storage savings for IT.
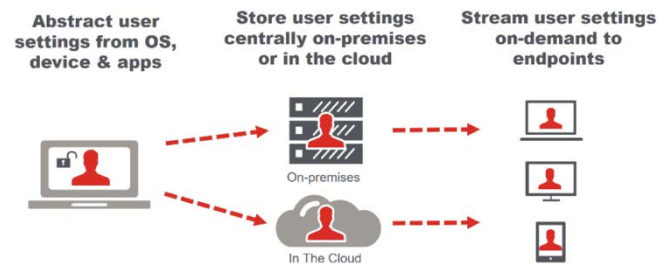

Shared Workstation support: Imprivata OneSign user-specific logons enable fast switching between multiple concurrent Windows desktops. Ivanti ensures that the user gets a personalized, high-performing desktop by enabling a high level of granularity for user settings and abstracting and saving those settings separately from the OS.

BYOD: Clinicians expect to be able to use smartphones, tablets, and laptops within and outside of clinical facilities. Imprivata's agentless technology with strong authentication on a variety of devices—coupled with Ivanti's automatic device configuration based on that device e.g. font size, single vs double-click mouse actions, etc.—make BYOD workable for clinicians.

Monitoring and Reporting: Imprivata records all local and remote network authentication and application access, while Ivanti can analyze user logon to identify bottlenecks. Ivanti tracks user activities and logs application-specific events for audit purposes, for example, allowing a user to install new software, recording why the software was loaded, and noting any change in admin rights. What's more, Ivanti allows IT to set user privilege to lock down systems without compromising user productivity.

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare globally to access, communicate, and transact patient information, securely and conveniently. The Imprivata platform addresses critical compliance and security challenges while improving productivity and the patient experience.
