

Ivanti Endpoint Manager: Gain Control Over your On-Prem Endpoints

In order to protect your everywhere workplace from threats, you must know what and where your IT assets are at all times. Asset visibility is foundational—only when you know what assets you have, you can properly secure your IT investments, and optimize for best performance and cost. Ivanti is a recognized leader in unified endpoint management. Ivanti® Endpoint Manager increases user and IT productivity by helping IT administrators gather detailed device data, automate software and OS deployments, and quickly fix user issues.

Discover the Data that Helps IT Control Assets, Compliance, Costs, and Security

Know what's there before anyone else does. Ivanti EndpointManager provides extensive data about managed and unmanaged devices through industry-leading discovery and inventory technology. This information is key for boosting your level of insight into—and control over—business risks and costs due to:

- Software compliance fines and over-purchasing licenses
- Failing to meet corporate service level agreements
- Security vulnerabilities on end-user devices
- Excessive energy bills

Key Competitive Differentiators

Ivanti Endpoint Manager delivers unique value to our customers, regardless the size of organization or industry served. A few examples of our distinctive capabilities include the following:

- All-In-One Professional Management capabilities- Windows, macOS, Linux, and Chrome endpoints
- Ability to manage both traditional and modern devices
- Migration, provisioning and deployment of OS systems including Windows (Autopilot Support), macOS, and Linux devices
- Transparent and simple licensing model without hidden costs
- Open interfaces for custom automation projects
- Integrated Threat Protection

Unify Endpoint Management

Don't get overwhelmed by all your endpoints. No matter what leading device or OS your users have in their hands, you can manage various endpoints and operating systems with Ivanti Endpoint Manager, including:

- PCs/Servers: Windows, macOS, Linux, and Chromebooks
- IoT: Raspberry Pi OS

Gain one-click access to see, configure, and manage the IT policies and processes related to your users and groups and all their associated devices. Intelligent actions such as setting policies or distributing software take effect only on the user devices where it makes sense.

Provide Insight and Take Immediate Action

IT needs the right information at the right time and in the right place to take decisive action. A companion solution, Ivanti® Xtraction, enables you to customize dashboards and reports so you have the needed visibility to demonstrate how effective your IT initiatives are. Insightful Xtraction dashboards, real-time console dashboards, customizable reporting, and alerting tools include:

- Information and visual content about each user and all their devices
- Business value dashboards that can link to multiple IT and business data sources
- Role-based console with integrated dashboards and actions
- Gantt charts and status for automated software rollout projects
- Proactive monitoring alerts to identify potential issues for systems and users

Improve Productivity and Modernize IT

Ivanti Endpoint Manager is core to enabling unified IT. Automate IT tasks and modernize the experience to improve productivity for both IT staff and end users. Minimize issues that threaten user productivity caused by system outages, device downtime, and change and configuration activities. Keep pace with the insane cadence of OS migrations and updates from Windows and macOS. Save IT administrators from jumping between multiple consoles and free up time for more business-related initiatives.

On-Premises or in the cloud with Ivanti Neurons for UEM

Gain the flexibility around how you deliver IT and how you expense your IT. Where some vendors provide only one delivery model, Ivanti delivers the same endpoint management functionality and benefits.

Key Capabilities

Discovery/Inventory

Discover devices and software on those devices, then normalize data for better reporting.

Remote Control

With remote control you can analyze systems, resolve problems, and reduce desk-side visits.

Software Distribution

Target user groups or provide an app store experience—downloads software automatically to the correct devices.

Patch Management

Automate OS and application patching and isolate and remediate security threats to stay secure and keep your endpoints up-to-date. (add-on capability required)

Modern Management

Manage and secure Windows and Mac devices from one console with easy enrollment (including Windows Autopilot and Apple Business Manager) and policy management.
