# Android Migration and Modernization Simplified

## Ivanti Supply Chain (formerly Wavelink) is here to help

**With a 20-year history together, Ivanti (formerly Wavelink) and Zebra are proud to collaborate on the Zebra TC8000 and Zebra WT6000 Migration and Modernization promotions. These devices already include licensed and loaded All-Touch TE, powered by Wavelink.**

**Join more than 900 companies who are using Velocity (All-Touch TE under Zebra branding), the most complete telnet migration and modernization platform on the market. This is an opportunity to use this migration to increase productivity, not just modify colors and fonts.**

Optimize

Modernize

Speech

## Two Offers to Choose From

With the purchase of five (5) or more Zebra TC8000 or WT6000 mobile computers, you gain access to a selection of free* Android All-Touch TE Migration services from Ivanti.

Best of all, there are no software clients to buy. Velocity already ships from Zebra, loaded and licensed on your new TC8000 or WT6000 devices!

### Option 1: Terminal Emulation Migration Services from Windows CE/Mobile to Android

- **Installation:** Client comes preloaded from the factory with a license, so there's nothing to buy other than the device. We offer remote assistance with: configuration of ATTE; initial configuration of Telnet/SSH host; validation of end-to-end application connectivity using standard TCP/IP networks and protocols (no networking or encryption gimmicks); and initial configuration of keyboard map and barcode configuration settings in client for application

compatibility. Client configuration will be replicated to apply to all devices.

- **Security and Session Persistence:** Enable and configure SSL/SSH encryption if desired; enable and configure Session Persistence; and configure Velocity Console session profiles. Only standard TCP/IP networking and configuration required; no tunnels or dealing with unrouteable protocols!

- **All-Touch TE "green screen":** Introduction to ATTE client capabilities; initial configuration of screen keyboard (transparency, soft keyboard options, custom keyboard layout and selection); define Extended Keys menu button; configure client menu behavior.

### Option 2: Terminal Emulation Modernization Services

- **Installation:** Client comes preloaded from the factory with a license, so there's nothing to buy other than the device. We offer remote assistance with modernization of up to five (5) screens, and up to 15 hours of consulting time, including: identifying target

application; analyzing workflow for optimization; and initial configuration and assignment of keyboards and barcode settings in client for application compatibility. Client will be replicated to apply to all devices.

- **Security and Session Persistence:** Enable and configure SSL/SSH encryption if desired; enable and configure Session Persistence; and configure Velocity Console session profiles. Only standard TCP/IP networking and configuration required; no tunnels or dealing with unrouteable protocols!

- **Modernization and App Optimization using All-Touch TE, powered by Wavelink Velocity:** Introduction to ATTE client capabilities; study workflow of target modernization screens; screen keyboard options; define Global Keys menu; define templates; modernize up to five (5) screens and receive source files. This is genuine modernization to increase productivity, not just application of a template to change colors.

## Already Purchased Qualifying Zebra Devices?

Visit the **Zebra Pro Services Promotion** microsite to begin the migration process.

*Customers must provide ISVs with an invoice or other proof of purchase for the Zebra units. Migration services must be scheduled with Ivanti within 30 days of device purchase and the customer will have 90 days from purchase date to take full advantage of the offer.
