

# 10 Things Federal Agencies Must Consider

## PREPARE FOR A NEW RELEASE CADENCE

Microsoft offers three different servicing channels. You'll need to research and decide which channel is best for your agency or organization to get critical updates.

## DON'T LET YOUR APPS BE A BARRIER TO MIGRATION

Identify mission-critical agency applications that might have compatibility issues on Windows 10. Test them before migrating and decide whether to continue support.

## PICK AN OS DEPLOYMENT STRATEGY

Decide what endpoints you're going to replace, re-image, or upgrade. Save time and money by timing device replacements with your OS migration.

## INCREASE SECURITY WITH PROPER PATCH MANAGEMENT

A comprehensive patch management solution can protect your agency by detecting vulnerabilities without disrupting the continuity of operations.

## STOP MALICIOUS OR UNLICENSED APPLICATIONS

Implement application control to add another layer of protection. Go further with Ivanti's Trusted Ownership model to better protect against zero-day threats.

## MANAGE USER ADMIN PRIVILEGES

Get granular control over admin privileges. Reduce privileges without removing them completely, and enable self-elevation when necessary.

## PLAN FOR A HYBRID ENVIRONMENT

Not all work is done in the office. Utilizing info about user context like location, device, connection, or even time of day will help you determine resource entitlement.

## CREATE THE \*ULTIMATE\* USER EXPERIENCE

Track logon times, application usage, and other key metrics - allowing you to anticipate potential bottlenecks that could affect quality of service.

## GIVE USERS EASY ACCESS TO THEIR DATA

Enable effortless migration of user data, no matter where it resides. Provide secure storage options to allow users to access their files and folders from anywhere.

## PERSONALIZE USER WORKSPACES

Maintain user settings post-migration by capturing and managing user personalization information to ensure personal settings are always available, regardless of the device or platform used.
