# Ivanti® Unified Endpoint Management

**Your organization's employees depend on multiple devices, and each should be personalized to their business needs. However, managing their endpoints demands coverage of both the user experience and the device. With Ivanti, you gain that coverage with an integrated, total-picture management experience. When everything is visible, you can ensure productivity reigns supreme both with users and your IT staff, regardless of what device they choose.**

## Manage Users, Not Just Their Devices

Organizations must address how to manage and enable the operating systems, applications, and profiles in corporate environments. It's time to end the complexities of separate solutions for enterprise mobility management (EMM), client management, and user experience management. When you deploy the right endpoint management solution, expect it to do the following:

- Simplify and secure enterprise mobility alongside your users' laptops and desktops
- Apply policies, personalization, and actions quickly across all devices
- Provide assets or services to users via self-service or a targeted distribution
- Leverage the intelligence of the system to determine which users and devices get what

No one else can do this like Ivanti because others don't unify the management of all systems users leverage— Windows (physical and virtual), macOS, Linux, Unix, iOS, and Android. Ivanti covers everything from mobile device management (MDM)-style functionality to user security configurations and profile settings.

## Keep Pace with Windows 10 Management

Ivanti Unified Endpoint Management allows you to migrate users' personal settings and files easily to Windows 10. However, migration is only the start of the Windows 10 journey, and Ivanti also automates the large, frequent Windows-as-a-Service updates with minimized network overhead. The solution manages all aspects of your user workspace, including the software that drives productivity in your organization.

## Integration that Unifies IT

Many IT solution vendors profess to "work with" or be "compatible with" other solutions claiming to provide Unified Endpoint Management (UEM). However, when something goes wrong, the finger pointing begins. With Ivanti, you have a single vendor for all aspects of endpoint management. The Ivanti solution also integrates across IT disciplines to create unified solutions focused on increasing security, asset tracking and license compliance, and automation for digital transformation.

## Visibility to Act Faster

The discovery and inventory of all endpoints is also key to unifying IT. When you add the right data integrated into a business-value dashboard, life in IT becomes clearer and actions happen faster. Ivanti® Xtraction helps you create business value dashboards easily—without data scientists or gurus—and ties together all your information into data visualizations that make sense and promote quick action from your teams.

## Deliver Common User Experiences Across Devices

Your users want more than content; they long for a better user experience—achieved through a user workspace that's personalized. A personalized workspace also delivers higher productivity when logon times are shortened and desktop responsiveness is improved. Witness the number of support calls drop as you increase user satisfaction. Plus, help your new employees start out right by ensuring all their devices are configured consistently, ready to help them excel at their jobs.

## Resolve Users' Support Issues Universally

When a user needs support, ensure the resolution covers all the devices they carry. Remote-control their PC, distribute software and patches or reimage their device on an individual basis, or do any of these actions on a broader scale. With these tools at hand, you'll elevate the level of service and eliminate repeat calls.

## Install On-Premises, in the Cloud, or as a Managed Service

Where some vendors only provide a single delivery model, Ivanti delivers the same management functionality and benefits either on-premises or in the cloud. When in the cloud, choose to either use your own resources or leverage Ivanti's expertise to perform core management tasks, leaving your team to concentrate on other business-focused projects. You won't find more flexible, integrated UEM solutions that fit your organization's needs.

**Gain visibility and manage the devices your people employ—all within a unified, simplified experience.**
