

Why Avalanche?

Avalanche is mobile device management (MDM) designed for your most critical mobile deployments. It keeps task workers connected, effective, and therefore at peak productivity. Here are some of the reasons our customers have trusted Avalanche as their MDM throughout supply chain and retail mobile deployments:

Easily Target Devices for Updates

Organize test groups for app updates, and segment deployments by specific workgroups or roles.

Fast App Updates

Update all workers' devices during a scheduled break – even remotely, in as little as 10 minutes.

Powerful Insights

Get clear details about Key Performance Indicators (KPI) on device utilization, compliance, and risk, throughout the mobile fleet.

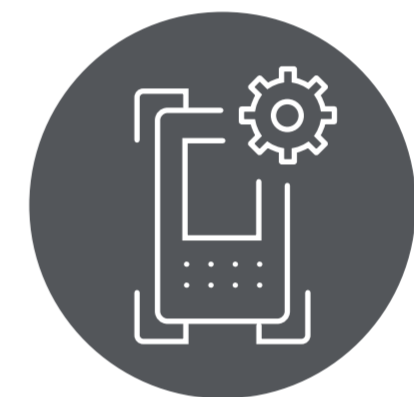

Trusted for Legacy Devices, Optimized with Android Enterprise

Ensures you're ready for today's and tomorrow's business.

Resolve Issues Fast

Centralized remote control and troubleshooting keeps workers productive.

Manufacturer-specific Device Settings

Control device-specific functions to manage and troubleshoot, including OEM Configurations through Android Enterprise.

Server Independent

Workers remain productive even in event of a server failure.

100,000 Devices Deployed? No Problem!

Recognized for large-scale, single-customer deployments around the world. Manage different geos, time zones, business units.

Own the OS Update Schedule

Plan operating system updates for non-operational times, so workers aren't delayed during tasks.

Three Decades of MDM

Ivanti understands the unique requirements of supply chain and retail mobile deployments. We make it easy to manage different geos, time zones, business units, workgroups and devices, easily. That's why we're depended on to keep the biggest supply chain deployments secure, available, and accessible.
