An Automated Path to Windows 10 Migration

Are Windows 10 worries robbing you of sleep? Issues like missing user profiles, unexpected downtime, and incompatible applications can muddle migration. And when it's done, how do you maintain it?
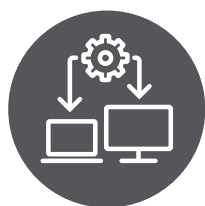

Ivanti's Unified Endpoint Manager and File Director solutions enable a migration path that delivers the OS, apps, and user profiles workers need to stay productive. These solutions also provide the maintenance processes needed to keep pace with Microsoft's release cadence.

The OS is locked down

Once you have your single image of your preferred channel of Windows 10 OS, deploy it quickly with Ivanti Unified Endpoint Manager.

Drivers employed

The solution only pulls the drivers required for each device using hardware independent imaging (HII) technology.

Apps configured

Ivanti Unified Endpoint Manager then automates app configurations based on the destination OS. Once apps are reinstalled, Ivanti can help you track all your software licenses from that time forward.

User profiles migrated

Migrate user profiles easily to keep the user experience consistent. Ivanti's solution also decreases future device logon times.

User desktop files sync'd

Sync user desktop files—even PST files—to on-premises or cloud storage with audit, security, and precise IT controls. Users can continue to work and save documents in their usual locations using Ivanti File Director.

Monitor your migration progress with the included Ivanti Xtraction Windows 10 dashboard.
