

# Speed Operations, Increase Safety, and Save Costs with **Speakeasy**

## Voice Enablement

The high cost of implementation and the complexity of deployment have historically limited traditional voice adoption to only a few use cases – primarily, warehouse picking. Ivanti Speakeasy breaks those barriers and enables seamless voice solutions with value to improve your productivity and safety.

### CAPABILITIES

- No middleware – works with any WMS
- Speech-to-Text / Text-to-Speech (supports 50+ languages)
- Non-proprietary
- Multi-modal (Voice, scanning, RFID, screen)

### BENEFITS

- Designed for enterprise apps
- Reduces training time
- Costs less than traditional voice
- Fast implementation = fast ROI

## Why Speakeasy vs Traditional Voice

No Voice-dedicated Hardware	No Middleware or System Interfaces	No Host-System Modifications	No Hidden Fees
Speakeasy deploys on the already powerful rugged devices.	Speakeasy sits on the existing terminal emulation or web apps and works with any WMS.	Simply passes data back to the host system in the same way that the barcode scanned data is communicated.	Deploys on the device and doesn't require host system modifications once voice-enabled, therefore, no additional cost.

## Is your warehouse ready for VOICE?

Ivanti Speakeasy, powered by Wavelink, is the industry-leading voice-enabled solution for a reason. It's hassle-free, efficient, requires minimal training, and is one of the most flexible products in the industry. Learn how Speakeasy can transform your warehouse in less than 30 days.
