

Velocity or Native apps?

Companies are contemplating dedicated native apps. After going down the path, they are learning the complex and expensive reality of doing so.

NATIVE APPS

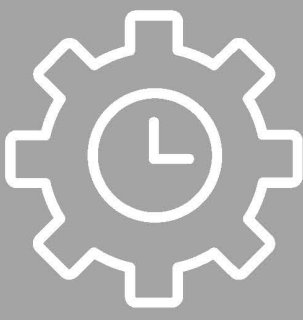

VERY COSTLY

Finding and keeping experienced coders to develop, test and synch updates, and maintain is costly

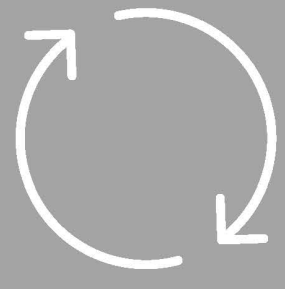

NO FLEXIBILITY

Apps are purpose built to do one thing. If nothing changes, all is good

TIME CONSUMING

Long testing, deployment, and maintenance cycles

FREQUENT UPDATES

Must keep pace with many updates per year - Android/app/host versions across fleet, device models, makers and their tools

HIGH-RISK

Is app data secure?
App/security patches up to date?
Native apps have lots of moving parts

SUPPORT

Will you keep enough dedicated staff on board to respond to issues/changes?

VELOCITY

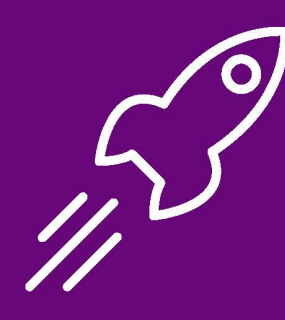

COST-EFFECTIVE

Common dev tools used by many developers, easy to dev and deploy

FLEXIBILITY

Delivers the same user experience, regardless of device Operating System

READY TO DEPLOY

Aim the client at the host app address and start working

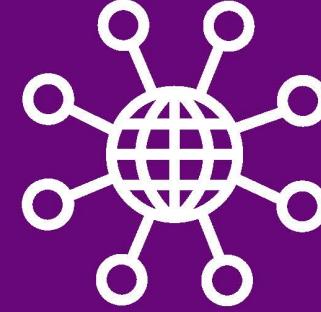

EXPERTISE

Consolidates 30 years of product knowledge with host/server systems

LOW RISK IN UPGRADES

Works today with most WMS systems. Changes made to pages are updated automatically with the next host connection.

ENTERPRISE SUPPORT

24x7 global support

Velocity is your pathway forward from legacy applications, without the risks of native apps. Request a custom demo here to get started on your path to increased warehouse efficiency.
