Ivanti Enterprise License Agreement

The Ivanti® Enterprise License Agreement (ELA) is an innovative licensing vehicle. Now organizations can take advantage of Ivanti's full portfolio to unify their IT and deploy solutions that match their business initiatives—without spinning up a new procurement cycle or worrying about where to find budget for each initiative.

What's inside?

Endpoint

Endpoint Manager: Discover the data that helps IT control assets, compliance, costs, and security. Gather detailed device data, automate software and OS deployments, and quickly fix user issues.

Environment Manager Policy: Replace slow, complex logon scripts and GPOs to deliver fast logon times for users with minimal effort from IT.
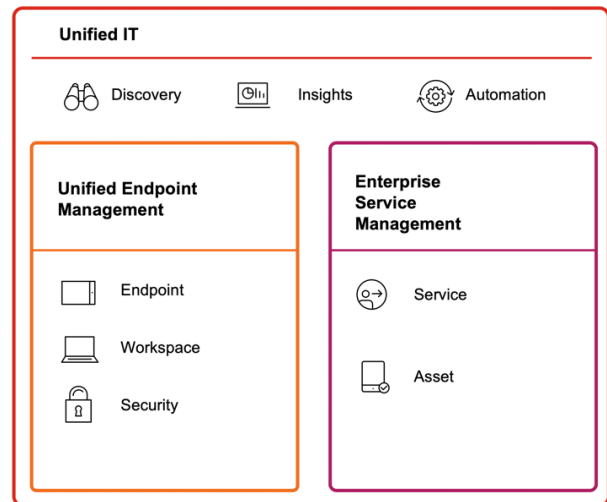

Data Analytics: Discover, extend, and normalize detailed asset data for better consistency and reporting.

Workspace

Environment Manager: Deliver a consistent and portable user environment. Provide on-demand personalization and fine-grained, contextual policy control.

File Director: Experience effortless file sync and migration between desktops, your data center, and the cloud. Eliminate data sprawl and ensure centralized back-up of corporate data.

Performance Manager: Boost users per server and control CPU-hogging apps. Allocate CPU, memory, and disk resources dynamically to deliver unsurpassed workspace performance.

Patch and Security

Ivanti Security Controls: Benefit from discovery of authorized and unauthorized software, patch management, dynamic whitelisting, and granular privilege management.

Endpoint Security: Enable users to secure client environments with comprehensive, layered security. Prevent, detect, and remediate even the most sophisticated threats.

Application Control: Deliver secure Windows privilege management, prevent unauthorized executables, and enable your IT team to manage application access and user privileges.

Asset Management

Asset Manager: Gain the edge you need to make your assets work harder for you through insight into where your assets are, how much they're costing you, and how they're performing throughout their lifecycle.

License Optimizer: Gather the needed insight to minimize cost, mitigate risk of audits, and support transformation initiatives across all IT environments.

License Optimizer identifies what you are using and normalizes the information into a single view of truth. This information is then reconciled against your entitlement data. Not only does this identify where you are under-licensed or over-licensed, which is critical for audit defense, it also offers guidance on optimization to reduce costs proactively.

Service Management

Service Manager: Enable your teams to achieve world-class service management capabilities for IT and other business departments.

- Automated workflows eliminate costly manual processes while making operations more efficient, compliant, and secure.
- Users submit and track requests through a web-based self-service tool, opening the service desk for 24×7 customer access.

Voice: Increase first-call resolution rates and handle calls more effectively with intelligent call routing, integrated voice response, voice self-service, screen pops, and call management functionality.

Automation

Automation: Break free from manual IT tasks by automating infrastructure, cloud, and workspace processes.

Transform labor-intensive tasks into automated workflows. Control who can make changes and when they'll be executed. Integrate with other sources, including IT service management, IT asset management, and more. Employ audit trails, historical reporting, and configuration analysis to meet compliance initiatives.

Insights

Xtraction: Power your IT decisions based on real-time, comprehensive views of your IT environment. Anyone can create personalized reports or dashboards and recut them anytime. Monitor, explore, and share critical information in real time. Foresee problems before the end-user experience is compromised.
