

# Automate IT and Security Operations

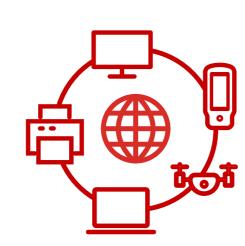

#### Discover, Manage, Secure and Service Endpoints

In the new world of working remotely, IT and security operations teams are facing an explosion of new endpoints and edge devices along with all of the accompanying cybersecurity threats and challenges.

### **Explosive Device Growth**

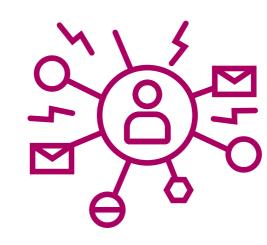

#### **Rising Cyber Attacks**

41.6 Billion

connected devices at the edge by 2025 will generate 79.4 (ZB) of data<sup>i</sup>

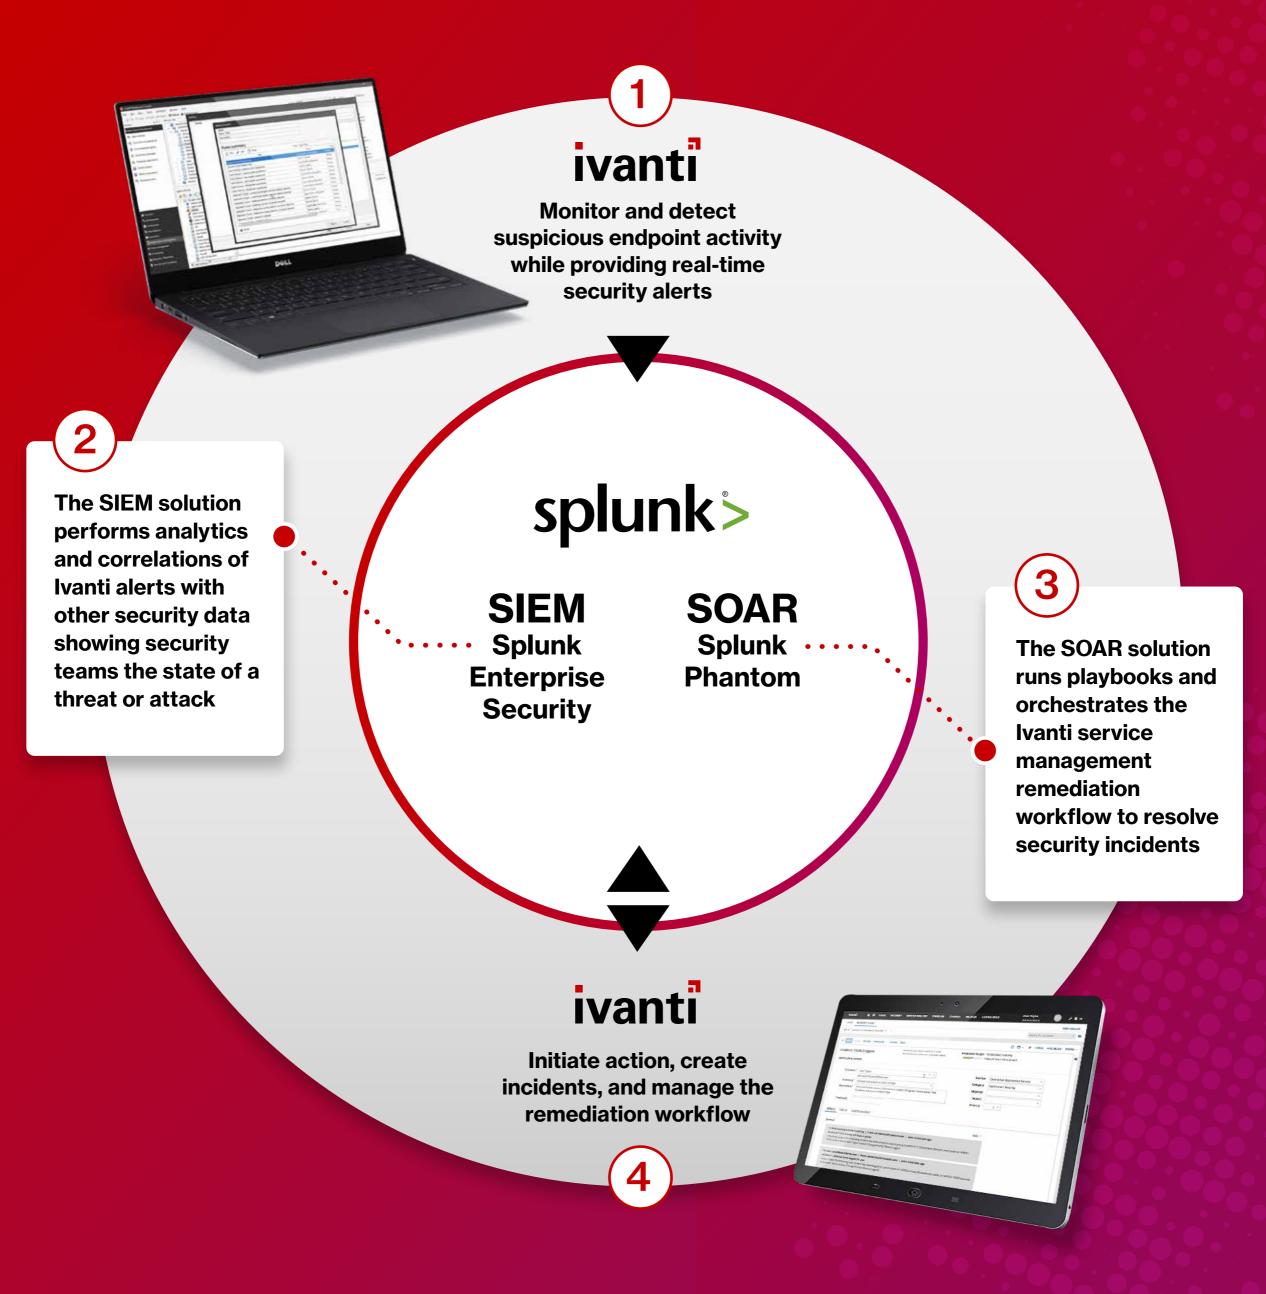

30,000%

increase in phishing, website, and malware attacks targeting remote users

## **End-To-End Workflow To Effectively Remediate Security Vulnerabilities**

This automated end-to-end workflow powered by Ivanti and Splunk, helps you to sense suspicious endpoint activity, contextualize the threat, orchestrate appropriate actions, and efficiently remediate the security incident. Fully automatically and in real-time.

Augment your Splunk solution with Ivanti to proactively detect and remediate endpoint security vulnerabilities before they harm your environment.

Learn how Ivanti solutions can help you Automate your IT and Security Operations.
