

3

Ways to Get Faster SLAs

1

Research Risks

\$20B By 2021

\$20 Billion in damages from ransomware attacks is expected by 2021.ⁱ

How reliable is your data? Make sure it's pulled from a variety of public and crowdsourced data.

2

Prioritize Threats

60% of breaches involved vulnerabilities where a patch was available but not applied.ⁱⁱ

60%

Do you have an accurate picture? Seek to understand your greatest challenges through risk-based prioritization.

3

Receive Insights

Only 40% of organizations have cybersecurity compliance practices to track vulnerabilities.ⁱⁱⁱ

40%

Can you see what is vulnerable? Monitor and mitigate out-of-compliance machines through one centralized view.

Ivanti Neurons for Patch Intelligence

Achieve faster SLAs for your vulnerability remediation efforts via supervised and unsupervised machine learning algorithms.
