

Manage your endpoints from the cloud with UWM hybrid

Ivanti Neurons fuels your IT with real-time intelligence you can act on, enables devices to self-heal and self-secure and provides users with a personalized self-service experience.

Ivanti User Workspace Manager (UWM) is now part of Ivanti Neurons, allowing you to manage and deploy your UWM configurations and agents via the cloud.

Key benefits of UWM & Neurons

Increased flexibility: endpoints no longer need to be connected to the internal network to receive updated agents and configurations. This allows greater flexibility to manage your endpoints in the modern extended workplace

Reduce on-premises hardware: On-premise Management Centre servers are no longer required, so you can save time and money by reducing your hardware requirements.

No-hassle upgrades: Management Centre updates no longer require planning and testing. Updates are applied automatically to your Ivanti Neurons tenant.

Utilise Ivanti Neurons For Edge Intelligence: Ivanti Neurons For Edge Intelligence gives IT the ability to gather real-time insights from all devices. Access to Edge Intelligence comes as standard with UWM hybrid.

Is UWM now a Cloud-only product?

The latest release of UWM gives you the ability to manage and deploy your agents and configurations from Ivanti Neurons. This takes the place of the Management Centre (although the on-premises Management Centre is still available).

We have called this a 'hybrid' release, as you'll still need to use the UWM consoles on Windows devices to create and manage your configurations.

This is a first step in bringing UWM capabilities to the cloud, and more features are planned for the future.

How does UWM integrate with Ivanti Neurons?

In this first release, you'll be able to save configurations from Environment Manager, Application Control and Performance Manager consoles directly to your Ivanti Neurons tenant. This will work in a similar manner to saving configurations to SCCM.

What are the benefits of using Ivanti Neurons with UWM?

Our hybrid release is the first step in moving UWM capabilities to the cloud. A major initial benefit is the ability to deploy agents and configurations to devices outside the corporate network.

Over the past three years, there's been a big increase in the amount of remote working, and with that comes devices that aren't always connected to the internal network to receive updates.

This supports Ivanti's 'Everywhere Work' approach in enabling greater flexibility and freedom for both you and your employees.

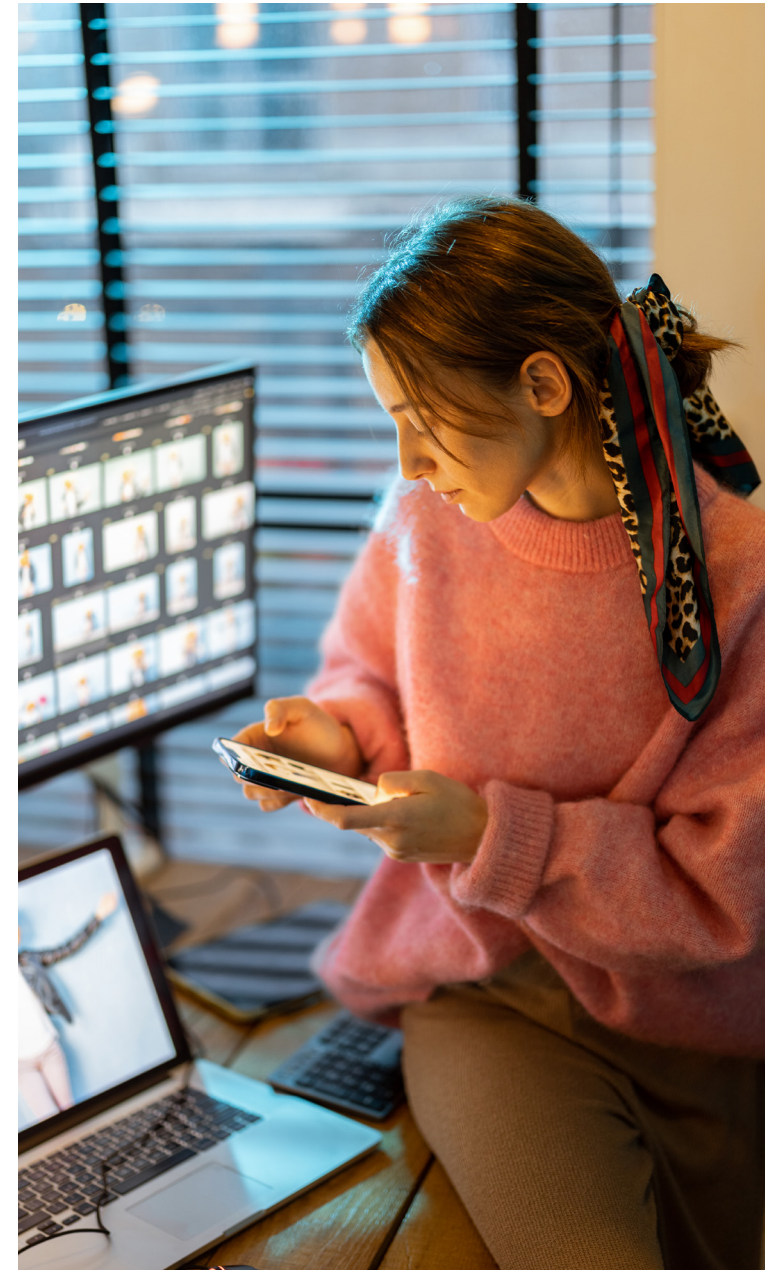

What's included with Ivanti Neurons?

In addition to the UWM deployment features now available in Ivanti Neurons, you'll also be able to utilize the capabilities of Ivanti Neurons For Edge Intelligence.

As an integral piece of the Ivanti Neurons platform, Ivanti Neurons For Edge Intelligence gives IT the ability to gather real-time insights from all devices using Natural Language Processing. It provides operational awareness in seconds of inventory, health and security configurations across the edge leveraging a sensor-based architecture.

For users of UWM, the information gathered by Edge Intelligence will be of great benefit when it comes to planning or managing your UWM configurations.
