Maximize Productivity for the Evolving Workforce

The expandable platform to transform the mobile workforce experience

Accelerate toward operational excellence

Your workforce is evolving, as are the expectations of your customers. To keep up with faster delivery cycles, you must increase the rate of task completion across your operations – from picking to replenishment, receiving to returns processing. The Velocity platform is designed to help you achieve these and other key performance indicators (KPIs) with intuitive navigation and built-in automation. Velocity is the foundation for adding powerful platform technologies, including voice-directed workflows, and emerging technologies that will help retain your top talent while keeping your operations on the leading edge for years to come.

Extend the value of existing systems

You have spent countless hours and invested significant budget to fine-tune your enterprise systems – your warehouse management (WMS), enterprise resource planning (ERP), customer relationship management (CRM) and other systems. Velocity interfaces to these existing enterprise apps as they are – no changes required.

Modernize and optimize

Delivering work experiences that maximize your workers' familiarity with modern technology shortens training times, speeds productivity and ignites higher performance. Velocity makes it easy to take existing enterprise system apps and provide a mobile interface that looks and works like common smartphone apps. Tap, swipe and scroll intuitively through task workflows. Introducing automation eliminates repetitive actions, so workers navigate tasks in fewer steps and complete more assignments per shift.

Integrate emerging technologies

New additions to the operational tech stack help workers outperform KPIs. From environmental sensors that track shipments of refrigerated foods or medications, to autonomous mobile robots that reduce worker travel time throughout your facilities, Velocity makes it easy to add new operational tech for a variety of emerging use cases.

Consistent experience

A worker using a rugged handheld device today for shelf audits may be equipped with a wearable barcode scanner for order picking tomorrow or using a tablet for guided-selling tasks on the store floor. Velocity provides a common experience on all the devices across your mobile fleet, so your workforce delivers their best to your customers, and trust the tools they are given to help them earn performance incentives.

Modernize "green screens"

Convert green Courier font text-based telnet mobile interfaces into modern tap-and-swipe apps that are easy to learn and intuitive to use.

Secure browsing

Connect to SAP S/4 HANA and other web-based enterprise applications without middleware or servers, while restricting workers' web access to only the systems and sites necessary.
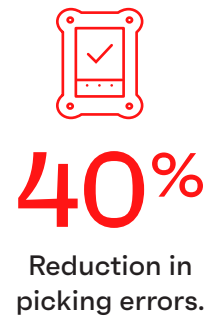

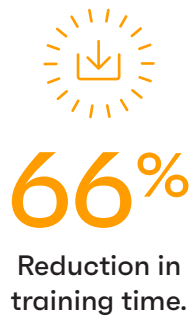

Automate data entry

Connect to enterprise systems via telnet or the fast-rendering Velocity browser and populate data via powerful scripting and advanced control of barcode/RFID scan parameters.

Faster task navigation

Optimize Velocity tasks with automation that reduces keyed entry, or eliminate whole steps in a workflow, without any changes to your enterprise systems.

Real Results

66%

Reduction in training time.

24%

Faster picking cycle times.

40%

Reduction in picking errors.

Accelerate your path to operational excellence and help retain top talent in your operations. Let us show you how easy it is to get started on Velocity.
