

# Securing Supply Chain Operations

Cybercriminals will look to ransom the data stored in enterprise systems, holding shipments (and revenue) hostage. Supply chain workers and managers are essential to your operation's threat prevention initiatives.

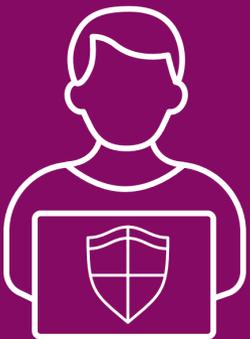

## 32%

of attacks against supply chain operations in 2023 exploited software vulnerabilities. An equal share saw the bad guys use social engineering tactics.

## 58%

of supply chain managers categorize cybersecurity as a top concern.

## 86%

of workers feel a responsibility to prevent cyberattacks, though only two-thirds report receiving cybersecurity training.

Discover the details you and your security teams need to know about supply chain threats in our **2024 Supply Chain & Warehouse Trends** report.
